

15 Days of Winter Break

Winter Scent Lab

What You Need:

- 6 empty glass jars
- cloves
- cinnamon stick
- pine twig
- vanilla extract
- coffee grounds
- peppermint (Altoids® brand recommended)
- water
- food coloring

Instructions:

1. Put each scent in a separate jar.
2. Fill the jars with water. Use food coloring that doesn't match the scent (for example, don't use green with pine) for your test later.
3. Cover the jars and wait. It works best if you let the items soak for 1-3 days.
4. Remove items from the jars if they haven't dissolved.
5. Smell the different jars. See if you can trick anyone!

What other scents remind you of winter? Add those to the lab.
