# My Little Sprout House

Name _____

How to Make Your Sprout House:

1. Fill a cup of water and soak the seeds over night, this will speed up the germination process.

2. Dip cotton balls in water, squeeze out the extra so they are not dripping. Place them in the Ziploc bag.

3. Take the seeds out of the water, drop them in the bag and seal it.

4. Color and then cut your sprout house out. Remember to cut out the square inside the house as well.

5. Tape the Ziploc bag to the back of the house. Then tape the bag to a window.

6. Check your house often to watch your flowers begin to grow.
